PROJECTS

Day - Health Journal   www.dayhealth.space
React | Redux | Node | ExpressJS | PostgreSQL | SASS

A full-stack health journal web application created to serve as a tool for users with chronic illnesses.
Frontend built with React, Redux was used for most of the data flow functionality; Styled with SASS. The backend runs on Nodejs, the server is based on ExpressJS and the PostgreSQL database is connected through Massive.

GameHub - social media for gamers   www.gamehub.club
React Hooks | Redux | Node | PostgreSQL | Styled Components

Users are able to login using existing accounts using Auth0. In the platform, they can search other users and clans. Create, join or invite to clans and create, delete or reply posts.
This app was built using React Hooks in the front end. The authentication process was made using Auth0. Redux was used for many of the React components that required shared data. The backend runs on NodeJS, the server is based on ExpressJS.

EDUCATION

DevMountain
Web Development Immersive Bootcamp
January - April | 2019
